PROFILE SUMMARY

I am a security engineer who pursues stable system operations based on experience in analyzing and responding to security threats. With strong capabilities in security assessments, threat analysis, and incident response, I aim to protect organizational information assets and contribute to an environment that continuously enhances security levels.

- Japanese: in the middle

WORK EXPERIENCE

ABC Security Solutions

2034 - PRESENT

Security Engineer

- Monitored and analyzed security logs and events to detect potential threats and anomalies.
- Conducted regular security assessments and vulnerability scans to identify and mitigate risks.
- Responded to security incidents by following incident response procedures and documenting findings.
- Assisted in maintaining secure system and network configurations to ensure stable operations.

XYZ IT Services

2032 - 2033

Junior Security Analyst

- Supported security monitoring activities in a SOC environment, analyzing alerts and events.
- Performed basic log analysis and reported suspicious activities to senior analysts.
- Assisted with vulnerability assessments and security checklists for servers and networks.

SecureTech Labs

2030 - 2032

Security Intern

- Assisted in performing penetration testing and vulnerability assessments on web applications and network devices.
- Participated in the development and implementation of security policies and best practices.
- Supported the security team in monitoring security alerts and preparing incident reports.
